PRODUCTION

MetAMINO® is synthesized from petrochemical raw materials using an environmentally friendly patented proprietary process by the feed additives business of Evonik Industries, known as the carbonate process. This proven complex, system results in a high quality product without the formation of waste salt, while largely avoiding pollution by waste air and water.

USE

Particularly for use in monogastrics. MetAMINO® ensures the adequate supply of sulfur amino acids, especially of the essential methionine. Because of methionine being first-limiting in typical poultry diets its use has been well established for many years. Additionally, diets for piglets and growing pigs can show a considerable deficiency in methionine, especially when formulated to achieve low nitrogen excretion for ecological reasons. Such a deficiency can be conveniently compensated for by using MetAMINO®. To supply methionine to ruminants, the feed additives business of Evonik Industries offers its Mepron®, a rumen stable form of methionine.
