

CROP REPORT 2023

AMINO NIR[®]

Dear Customer,

Evonik Nutrition & Care is committed to providing our customers with the most comprehensive and up-to-date information on feed ingredients. As part of this commitment, we have compiled a detailed report on the amino acid, crude fat, crude fiber, sugar, starch, and ash contents of corn, soybean meal, soybean expeller, corn-based dried distillers grains with solubles (DDGS), meat and bone meal, and wheat middlings for 2023. This report includes data on corn and soybean meal segmented by region, as well as data on meat and bone meal and wheat middlings for the first time this year.

Our analysis of the 2023 corn crop revealed a slightly lower crude protein content compared to the previous year, but a higher value of starch. The amino acid profile was similar to 2022, with slightly higher ARG and lower LEU and PHE values. The 2023 soybean meal crop showed an increase in crude protein compared to the previous year, with regional differences in crude protein content. Soybean expeller had a higher crude protein value but a lower crude fat value compared to 2022. The average crude protein content for DDGS was higher in 2023 than the previous year, but the oil content was lower.

We also reported on the processing conditions of soybean meal, soybean expeller, and DDGS. Soybean meal showed very good quality with optimum values for trypsin inhibitor activity (TIA) and reactive lysine. However, there was a large variation in TIA for soybean expeller, ranging from 1.9 to

13.1 mg/g. TIA values greater than 5 mg/g could potentially impair amino acid digestibility and animal performance. There was no indication of heat damage for DDGS samples reported as the reactive lysine to total lysine ratio was between 69.5 to 81.7%.

We take responsibility for generating this report, but its success is due to the samples collected by our customers and analyzed through Evonik's AMINONIR® laboratory service. By compiling this report, we aim to provide our customers with pertinent information and insight into general trends in each year's crops. For more comprehensive feed ingredient information, please contact our Evonik technical team to access the AMINODat® 6.2 database. Thank you to our customers who participated in the 2023 Crop Report. Without your participation, this report would not be possible.

Yours sincerely,

Paulo Sergio Teixeira
Regional Vice President Animal Nutrition

¹ AMINODat® 6.2

The processing conditions of soybean meal, soybean expeller, and DDGS were assessed using traditional laboratory assays, including Protein Solubility in KOH, Trypsin Inhibitor Activity and Reactive Lysine. Evonik has expanded its near-infrared spectroscopy (NIRS) portfolio to include AMINONIR® RED 2.0, a service that predicts the quality of heat-exposed soy products and corn-based DDGS based on these traditional laboratory assays. The data presented in this report was developed using the parameters predicted by AMINONIR® RED 2.0 on newly harvested soybean meal, soybean expeller, and DDGS samples in 2023.

Material	N Obs	Variable	Mean	Std Dev	CV	Minimum	Maximum
DDGS, Corn	42	Protein Solubility in KOH	33.1	3.8	11.4	27.1	41.6
		Reactive Lysine	0.7	0.1	8.8	0.5	0.8
		Reactive Lysine/Total Lysine Ratio	77.6	3.0	3.9	69.5	81.7
Soybean Meal	258	Protein Solubility in KOH	78.6	2.4	3.1	72.1	88.3
		Trypsin Inhibitor Activity (mg/g)	3.1	0.4	12.9	1.8	4.6
		Reactive Lysine	2.5	0.1	2.8	2.2	2.6
		Reactive Lysine/Total Lysine Ratio	87.9	0.8	1.0	85.6	90.2
Soybean Expeller	369	Protein Solubility in KOH	80.4	6.1	7.6	63.1	98.1
		Trypsin Inhibitor Activity (mg/g)	6.4	1.6	25.3	1.9	13.1
		Reactive Lysine	2.3	0.1	5.5	1.6	2.6
		Reactive Lysine/Total Lysine Ratio	89.7	2.4	2.7	79.9	93.8

OUR EXTENSIVE WEB-BASED DATABASE FOR ANIMAL NUTRITIONISTS NOW WITH FRESH CROP DATA FROM THE USA!

Our extensive nutrition database is the most comprehensive in the world and supports you in mastering the challenge of reducing costs while meeting livestock needs. It covers over 1,000 raw materials and more than 278,000 samples from all over the world, based on more than 13,000,000 analytical results.

With a new update, AMINODat® 6.2 now includes:

- State specific data for new harvest Corn and Soybean Meal in the USA:
 - 20 US States covered for Corn
 - 14 US States covered for Soybean Meal
- Fresh data sets on Bakery Meal, Corn DDGS, Meat and Bone Meal, Oats, Soybean Hulls, and Wheat middlings sampled in the USA
