

CORN SOY REPORT 2018

AMINO*NIR*[®]

Dear Customer,

In continuation of the long term commitment to our customers, Evonik Nutrition & Care has compiled a comprehensive report characterizing the amino acids, crude fat, crude fiber, sugar, and ash contents of corn, soybean meal, and corn-based dried distiller's grains with solubles (DDGS) for 2018. The data presented for corn and soybean meal are representative of the current U.S. crops and are segmented by region.

Consistent with previous years, the soybean meal from this year's crop shows significant regional differences in crude protein content, ranging from 46.5% for the Western Corn Belt to 48.7 % for the Midsouth. For the 2018 soybean meal crop, the mean crude protein content of 47.0 % is the highest observed since 2014.

Slight regional differences can be noted in this year's corn crop, with crude protein levels ranging from 7.3% for the Western Corn Belt to 7.7 % for the Southeast. Overall, the mean crude protein content of 7.4% is slightly lower than that of the 2017 crop.

In 2018, average crude protein content for DDGS slightly increased, at 27.3%, relative to the previous four years. Statistics from the DDGS data continue to confirm that this is a highly variable ingredient.

While we take the responsibility to generate this report, we feel that what makes it so successful is that it is entirely based on samples collected by our customers and analyzed through Evonik's AMINONIR® laboratory service. By compiling the report as presented, we believe that we can provide information that is pertinent to our customers and their operations, as well as give insight into general trends that are occurring in each year's crops.

Thank you to our customers who participated in the 2018 crop report. Without your participation, this report would not be possible.

Yours sincerely,

Ken O'Halloran

Regional Vice President Animal Nutrition
