

CORN SOY REPORT 2022

AMINO NIR[®]

Dear Customer,

In continuation of our long-term commitment to our customers, Evonik Nutrition & Care has compiled a comprehensive report characterizing the amino acids, crude fat, crude fiber, sugar, starch, and ash contents of corn, soybean meal, soybean expeller, and corn-based dried distiller's grains with solubles (DDGS) for 2022. The data presented for corn and soybean meal are representative of the current U.S. crops and are segmented by region.

For the 2022 corn crop, there was an increase of crude protein content (7.67 vs. 7.37 %), and decrease of starch (64.39 vs. 65.01 %) compared to the 2021 corn crop.

For the 2022 soybean meal, there was a decrease in crude protein compared to the 2021 harvest (46.12 vs. 46.63 %). Consistent with previous years, the soybean meal from this year's crop shows regional differences in crude protein content. Samples originating from Western Corn Belt, Eastern Corn Belt, Midsouth, Southeast, and East Coast reported 45.94, 45.92, 46.91, 46.47, 45.71 % of crude protein, respectively.

In 2022, the average crude protein content for DDGS was 28.62 %, higher than the previous year (28.53 %). Lower concentration of crude fat (8.18 vs. 8.39 %) was observed compared to the previous year.

Processing condition of soybean meal, soy expeller, and DDGS were reported. Based on the processing condition indicator (PCI), an Evonik-created parameter, 59 % of the

soy product samples showed optimal processing conditions (PCI between 12 and 14). 1 % of the soy samples could be slightly overcooked (PCI < 12) and 40 % of the samples could be slightly undercooked (PCI > 14). For DDGS, 27 % of the samples showed optimal processing conditions (PCI \geq 14). 17 % of the samples showed medium to severe heat damage (PCI \leq 11).

While we take the responsibility to generate this report, we feel that what makes it so successful is that it is entirely based on samples collected by our customers and analyzed through Evonik's AMINONIR® laboratory service. By compiling the report as presented, we believe we can provide information that is pertinent to our customers and their operations and give insight into general trends that are occurring in each year's crops.

Thank you to our customers who participated in the 2022 crop report. Without your participation, this report would not be possible.

Yours sincerely,

A handwritten signature in blue ink, appearing to read "Paulo Sergio Teixeira".

Processing condition of SBM and DDGS can be assessed by measuring the Protein Dispersibility Index (PDI), protein solubility in KOH, trypsin inhibitor activity, reactive lysine, and reactive lysine/lysine ratio. Evonik has added to its near-infrared spectroscopy (NIRS) portfolio a service, based on those traditional laboratory assays, that predicts the quality of heat-exposed soy products and corn-based DDGS—AMINONIR® RED 2.0. Moreover, the Processing Condition Indicator (PCI) is an Evonik-created parameter that incorporates all parameters aforementioned to provide an overall picture of the quality of the processed raw material. However, reactive lysine is the parameter that has more weight in the estimation of PCI. Reactive lysine is not involved in a Maillard reaction and is available to the animal. For SBM, PCI values between 12 and 14 are optimal, and for DDGS, PCI values equal to or greater than 14 are optimal. This report was developed using the parameter measured in AMINONIR® RED 2.0 from SBM, soybean expeller and DDGS samples scanned during 2022.

Material	N Obs	Variable	N	Mean	Std Dev	CV	Minimum	Maximum
DDGS, Corn	1,546	Protein Dispersibility Index (PDI)	1,546	18.1	4.2	23.4	7.9	36.4
		Protein Solubility in KOH	1,546	29.1	4.2	14.4	15.2	43.4
		Reactive Lysine	1,546	0.6	0.1	12.2	0.2	0.8
		Reactive Lysine/Lysine Ratio	1,546	72.4	5.1	7.1	45.2	89.7
		Processing Conditions Indicator (PCI)	1,546	12.7	1.3	10.3	6.0	16.2
Soybean Meal	422	Protein Solubility in KOH	422	79.0	2.5	3.2	61.4	89.8
		Trypsin Inhibitor Activity	422	3.2	0.5	15.3	1.8	5.8
		Reactive Lysine	422	2.5	0.1	2.3	2.1	2.6
		Reactive Lysine/Lysine Ratio	422	88.6	0.7	0.8	83.0	90.4
		Processing Conditions Indicator (PCI)	422	14.4	1.0	7.2	11.0	19.8
Soybean Expeller	537	Protein Solubility in KOH	535	82.4	3.9	4.7	57.8	96.4
		Trypsin Inhibitor Activity	535	6.9	0.8	11.5	2.8	10.1
		Reactive Lysine	537	2.3	0.1	4.5	2.0	2.7
		Reactive Lysine/Lysine ratio	521	89.9	1.5	1.7	81.7	94.0
		Processing Conditions Indicator (PCI)	521	16.4	1.7	10.1	10.0	22.2

Unit of Protein Solubility in KOH is %.

Unit of Reactive Lysine is %.

Unit of Reactive Lysine/Lysine Ratio is %
